FileCatalyst Workflow

The FileCatalyst Platform

Moving files is a critical process for your organization. FTP can be slow and unreliable, a combination that causes lost productivity and frustration. International file transfers are especially problematic, frequently disconnecting and rarely reaching full line speed. Predictability and “guaranteed file delivery” are virtually impossible with FTP.

FileCatalyst provides FTP alternatives that enable you to send files of any size or format at full line speed, hundreds of times faster than FTP, while ensuring secure and reliable delivery. All products in the FileCatalyst suite also integrate seamlessly with each other.

Each FileCatalyst product serves a unique set of organizational file transfer needs and works across a variety of industries. On its own, FileCatalyst Direct uses the FileCatalyst Server and a full suite of client options for point-to-point transfers. Combining FileCatalyst Direct with FileCatalyst Workflow provides a complete managed

At a Glance

- **Send files at speeds of up to 10Gbps**
- **Reliable delivery with checkpoint restart and integrity check**
- **Industry standard 256-bit AES encryption**
- **Watch folders/automation and web browser integration**
- **Integrated with leading broadcast workflow and MAM solutions**
- **Tightly integrated with leading cloud storage providers**

and accelerated web-based solution. Adding FileCatalyst Central allows you to monitor your organization's entire FileCatalyst deployment by offering a consolidated web-based view of file transfers on your network.

FileCatalyst Workflow Overview

FileCatalyst Workflow provides a customizable web portal that simplifies file exchanges and boosts productivity by streamlining submission, distribution, and file sharing workflows.

Users may submit files to your organization for processing, with full tracking at every stage, or they may securely distribute files to anyone with an email address.

File areas allow users to store files in your organization's local storage or private cloud for collaboration, with online access from anywhere. Additionally users may send requests to other people outside of your network to send them files.

Submission Workflow

This workflow enables administrators to create a customizable file upload web portal that includes metadata fields. End users can easily submit files along with the required metadata using only a web browser.

Collaboration Workflow

This workflow enables users to access web-based folders from anywhere using only their web browser. These web-folders may be private, or accessed through a group, providing a powerful means of collaboration with other users in the system.

FileCatalyst Workflow

- **Customizable web portal for file-based workflows**
- **File submission and distribution workflows**
- **Online file sharing and collaboration**
- **No end user software installation required**
- **No file size limits**
- **Automated archiving and file deletion**

Distribution Workflow

This workflow enables users to easily send files to anyone with an email address. When a new file transfer notification email is received by a user, they click a link and are taken to a download page. Recipients may then download the files individually, or as a package.

Request Files Workflow

1. User sends file request link for target folder
2. File request email
3. File upload to targeted folder
4. Confirmation email with link

This workflow enables users to access web-based folders from anywhere using only their web browser. These web-folders may be private, or accessed through a group, providing a powerful means of collaboration with other users in the system.

Why Choose FileCatalyst Workflow?

FileCatalyst Workflow is the best option for administrators that want complete control of all infrastructure their organization depends on. It is deployed entirely on machines you control. You get the the fastest possible access to on-premise storage and integration with on-premise LDAP/AD services.

FileCatalyst Workflow Unique Features/Benefits

- Dynamic multi-language support
- LDAP/AD with address book integration
- SSO, multi-factor authentication support
- Video preview generation for distribution workflow

About FileCatalyst

FileCatalyst is an Emmy® Award-winning file transfer acceleration solution designed to accelerate and optimize file transfers across global networks. Being immune to packet loss and latency, FileCatalyst can send files hundreds of times faster than traditional methods such as FTP, HTTP or CIFS, while adding security and reliability.
